

Thermal sum accumulations for Kanger in 2016 relative to historical patterns. Since 1975, only 1996 and 2010 have been this early. Median date of reaching 150 °days has been 7 June; in 1992 it was 22 June.

As of 14 May, budburst is projected for 20 May;
1st mosquito emergence is projected for 23-28 May.

Leaf-out of mountain birch in Lapland is ~ 150 °days > 3 C (Ayres 1993)

Culler et al (2015): “average dates of first mosquito emergence were 1 June and 15 June in 2012 and 2011, respectively”
From Kanger airport records, this was at 162 and 188 °days > 3 C.
